Chapter 6

Class Documentation

6.1 eu.uloop.mobilitytracker.BuildConfig Class Reference

Static Public Attributes

- static final boolean [DEBUG](#) = true

6.1.1 Member Data Documentation

6.1.1.1 final boolean eu.uloop.mobilitytracker.BuildConfig.DEBUG = true `[static]`

The documentation for this class was generated from the following file:

- gen/eu/uloop/mobilitytracker/[BuildConfig.java](#)

6.2 lib.api.CryptoID Class Reference

Public Member Functions

- [CryptoID](#) (ByteString bs)
- byte[] [getBytes](#) ()

Private Attributes

- byte[] [cid](#)

6.2.1 Constructor & Destructor Documentation

6.2.1.1 lib.api.CryptoID.CryptoID (ByteString *bs*)

6.2.2 Member Function Documentation

6.2.2.1 byte [] lib.api.CryptoID.getBytes ()

6.2.3 Member Data Documentation

6.2.3.1 `byte [] lib.api.CryptoID.cid [private]`

The documentation for this class was generated from the following file:

- [src/lib/api/CryptoID.java](#)

6.3 eu.uloop.mobilitytracker.DataBaseChangeListener Interface Reference

Public Member Functions

- void [onDataBaseChange](#) (List< [MTrackerAP](#) > apEntries)
- void [onStatusMessageChange](#) (String newMessage)

6.3.1 Member Function Documentation

6.3.1.1 void eu.uloop.mobilitytracker.DataBaseChangeListener.onDataBaseChange (List< [MTrackerAP](#) > *apEntries*)

6.3.1.2 void eu.uloop.mobilitytracker.DataBaseChangeListener.onStatusMessageChange (String *newMessage*)

The documentation for this interface was generated from the following file:

- [src/eu/uloop/mobilitytracker/DataBaseChangeListener.java](#)

6.4 eu.uloop.mobilitytracker.DetailsActivity Class Reference

Inheritance diagram for eu.uloop.mobilitytracker.DetailsActivity:

Protected Member Functions

- void [onCreate](#) (Bundle savedInstanceState)
- void [onStart](#) ()
- void [onStop](#) ()
- void [onDestroy](#) ()

6.4.1 Detailed Description

This class provides an activity that shows detailed information of a given AP.

Version

3.0

6.11.2 Constructor & Destructor Documentation

6.11.2.1 eu.uloop.mobilitytracker.MTrackerAP.MTrackerAP ()

MTracker AP Constructor

6.11.3 Member Function Documentation

6.11.3.1 `double eu.uloop.mobilitytracker.MTrackerAP.getAttractiveness ()`

Get the attractiveness of this AP

Returns

the attractiveness

6.11.3.2 `String eu.uloop.mobilitytracker.MTrackerAP.getBSSID ()`

Get the BSSID of this AP

Returns

the bSSID

6.11.3.3 `String eu.uloop.mobilitytracker.MTrackerAP.getLastGatewayIp ()`

Get the last IP shown by this AP

Returns

the lastGatewayIp

6.11.3.4 `String eu.uloop.mobilitytracker.MTrackerAP.getSSID ()`

Get the SSID of this AP

Returns

the sSID

6.11.3.5 `void eu.uloop.mobilitytracker.MTrackerAP.setAttractiveness (double attractiveness)`

Set the attractiveness of this AP

Parameters

<i>attractiveness</i>	the attractiveness to set
-----------------------	---------------------------

6.11.3.6 `void eu.uloop.mobilitytracker.MTrackerAP.setBSSID (String bSSID)`

Set the BSSID of this AP

Parameters

<i>bSSID</i>	the bSSID to set
--------------	------------------

6.11.3.7 `void eu.uloop.mobilitytracker.MTrackerAP.setLastGatewayIp (String lastGatewayIp)`

Set the last IP shown by this AP

Parameters

<i>lastGatewayIp</i>	String representing the last gateway IP to set
----------------------	--

6.11.3.8 void eu.uloop.mobilitytracker.MTrackerAP.setLastGatewayIp (int *lastGatewayIp*)

Set the last IP shown by this AP

Parameters

<i>lastGatewayIp</i>	Integer representing the last gateway IP to set
----------------------	---

6.11.3.9 void eu.uloop.mobilitytracker.MTrackerAP.setSSID (String *sSID*)

Set the SSID of this AP

Parameters

<i>sSID</i>	the sSID to set
-------------	-----------------

6.11.3.10 void eu.uloop.mobilitytracker.MTrackerAP.setToDefault (double *uloopDispositionalTrust*)

Set some parameters to default

6.11.3.11 String eu.uloop.mobilitytracker.MTrackerAP.toString ()

Return a string containing the SSID, BSSID and the Attractiveness.

6.11.4 Member Data Documentation

6.11.4.1 double eu.uloop.mobilitytracker.MTrackerAP.attractiveness [private]

6.11.4.2 String eu.uloop.mobilitytracker.MTrackerAP.BSSID [private]

6.11.4.3 String eu.uloop.mobilitytracker.MTrackerAP.lastGatewayIp [private]

6.11.4.4 String eu.uloop.mobilitytracker.MTrackerAP.SSID [private]

The documentation for this class was generated from the following file:

- [src/eu/uloop/mobilitytracker/MTrackerAP.java](#)

6.12 eu.uloop.mobilitytracker.MTrackerApplication Class Reference

Inheritance diagram for eu.uloop.mobilitytracker.MTrackerApplication:

Public Member Functions

- boolean [onCreateOptionsMenu](#) (Menu menu)
- boolean [onOptionsItemSelected](#) (MenuItem item)

Protected Member Functions

- void [onCreate](#) (Bundle savedInstanceState)
- void [onStart](#) ()
- void [onStop](#) ()
- void [onDestroy](#) ()

Private Member Functions

- void [updateListView](#) (List< [MTrackerAP](#) > apEntries)

Private Attributes

- [MTrackerService](#) mBoundService
- boolean [mIsServiceBound](#) = false
- ServiceConnection [mConnection](#)

6.12.1 Detailed Description

The Class [MTrackerApplication](#) is the front-end of the android application. It extends ListActivity to show the list of visited access points as a ListView. It starts the MTracker server, if not running already.

Author

Jonnahtan Saltarin (ULHT)
 Rute Sofia (ULHT)
 Christian da Silva Pereira (ULHT)
 Luis Amaral Lopes (ULHT)

Version

3.0

6.12.2 Member Function Documentation

6.12.2.1 void eu.uloop.mobilitytracker.MTrackerApplication.onCreate (Bundle *savedInstanceState*) [protected]

6.12.2.2 boolean eu.uloop.mobilitytracker.MTrackerApplication.onCreateOptionsMenu (Menu *menu*)

6.12.2.3 void eu.uloop.mobilitytracker.MTrackerApplication.onDestroy () [protected]

6.12.2.4 boolean eu.uloop.mobilitytracker.MTrackerApplication.onOptionsItemSelected (MenuItem *item*)

6.12.2.5 void eu.uloop.mobilitytracker.MTrackerApplication.onStart () [protected]

6.12.2.6 void eu.uloop.mobilitytracker.MTrackerApplication.onStop () [protected]

6.12.2.7 void eu.uloop.mobilitytracker.MTrackerApplication.updateListView (List< MTrackerAP > *apEntries*)
[private]

Update the ListView, cleaning the actual values and populating it with the values on apEntries.

Parameters

<i>apEntries</i>	the new access point entries to be shown.
------------------	---

6.12.3 Member Data Documentation

6.12.3.1 MTrackerService eu.uloop.mobilitytracker.MTrackerApplication.mBoundService [private]

The MTracker service to be bounded.

6.12.3.2 ServiceConnection eu.uloop.mobilitytracker.MTrackerApplication.mConnection [private]

Initial value:

```
= new ServiceConnection() {
    public void onServiceConnected(ComponentName className, IBinder service) {
        mBoundService = (MTrackerService.LocalBinder) service.getService();
        mIsServiceBound = true;
        updateListView (mBoundService.
        getData());
        mBoundService.setOnStateChangeListener(
            new DataBaseChangeListener() {
                public void onDataBaseChange(List<MTrackerAP> apEntries) {
                    updateListView (apEntries);
                }
                public void onStatusMessageChange(String newMessage) {
                    ((TextView) findViewById(R.id.infoText)).setText (newMessage);
                }
            }
        );
    }

    public void onServiceDisconnected(ComponentName className) {
        mBoundService.clearOnStateChangeListeners ();
        mBoundService = null;
        mIsServiceBound = false;
    }
}
```

The Connection to the MTracker service. When the service is successfully connected, it loads the ListView with the initial data and creates a listener on the MTracker service that re-populates the data on the ListView any time the DataBase changes

6.12.3.3 boolean eu.uloop.mobilitytracker.MTrackerApplication.mIsServiceBound = false [private]

Indicates if the MTracker service has been bounded successfully.

The documentation for this class was generated from the following file:

- [src/eu/uloop/mobilitytracker/MTrackerApplication.java](#)

6.13.1 Detailed Description

This class provides methods to insert, update and query the application database. It also provide methods to compute certain values, like the Rank and the Stationary Time, among others.

Author

Jonnahtan Saltarin (ULHT)
 Rute Sofia (ULHT)
 Christian da Silva Pereira (ULHT)
 Luis Amaral Lopes (ULHT)

Version

3.0

6.13.2 Constructor & Destructor Documentation

6.13.2.1 eu.uloop.mobilitytracker.MTrackerDataSource.MTrackerDataSource (Context context)

Constructor that takes Android Context as input.

Parameters

<i>context</i>	
----------------	--

6.13.3 Member Function Documentation

6.13.3.1 void eu.uloop.mobilitytracker.MTrackerDataSource.closeDB ()

Close the predefined MTracker database.

6.13.3.2 long eu.uloop.mobilitytracker.MTrackerDataSource.countVisits (MTrackerAP ap)

Computes the Number of visits that the node has done to a given AP.

Parameters

<i>ap</i>	The MTrackerAP whose Stationary Time is to be computed.
-----------	---

Returns

The number of visits.

6.13.3.3 MTrackerAP eu.uloop.mobilitytracker.MTrackerDataSource.cursorToAP (Cursor cursor) [private]

Converts a cursor pointing to a record in the ACCESS_POINTS table to a [MTrackerAP](#) object.

Parameters

<i>cursor</i>	Cursor pointing to a record of the ACCESS_POINTS table.
---------------	---

Returns

the [MTrackerAP](#) object

6.13.3.4 MTrackerVisit eu.uloop.mobilitytracker.MTrackerDataSource.cursorToVisit (Cursor cursor) [private]

6.13.3.5 Map<String, MTrackerAP> eu.uloop.mobilitytracker.MTrackerDataSource.getAllAP ()

Gets the all the AP recorded by the application on the ACCESS_POINTS table.

Returns

A map with the AP objects, and the bssid as key.

6.13.3.6 Map<String, MTrackerAP> eu.uloop.mobilitytracker.MTrackerDataSource.getAllAP (List< ScanResult > availableAP)

Gets the all the AP recorded by the application on the ACCESS_POINTS table, and the return only the ones that are also available in the List of ScanResult.

Returns

A map with the AP objects, and the bssid as key.

6.13.3.7 `List<MTrackerVisit> eu.uloop.mobilitytracker.MTrackerDataSource.getAllVisits ()`

Get a List with all the visit objects stored in the database.

6.13.3.8 `List<String> eu.uloop.mobilitytracker.MTrackerDataSource.getAllVisitsString (MTrackerAP ap)`

6.13.3.9 `MTrackerAP eu.uloop.mobilitytracker.MTrackerDataSource.getAP (String bssid)`

Gets an AP already registered by the application.

Parameters

<i>bssid</i>	The ssid of the AP which information should be returned
--------------	---

Returns

the [MTrackerAP](#) object, null if not found.

6.13.3.10 `MTrackerAP eu.uloop.mobilitytracker.MTrackerDataSource.getBestAP ()`

Checks all the AP registered by the application and return the one with the highest Rank.

Returns

the best AP registered by the application.

6.13.3.11 `MTrackerAP eu.uloop.mobilitytracker.MTrackerDataSource.getBestAP (List< ScanResult > availableAP)`

Checks the APs registered by the application and available in the List of ScanResult, and the return the one with the highest rank.

Returns

the best AP registered by the application.

6.13.3.12 `double eu.uloop.mobilitytracker.MTrackerDataSource.getInstantaneousRank (MTrackerAP ap, Long currentDuration)`

Test Method to compute the Rank of this node towards a given AP, taking into consideration the current visit time.

Parameters

<i>ap</i>	The MTrackerAP whose Stationary Time is to be computed.
<i>currentDuration</i>	current connection time.

Returns

The number of visits.

6.13.3.13 `long eu.uloop.mobilitytracker.MTrackerDataSource.getNumAP ()`

Gets the number of records in the ACCESS_POINTS table. This is, the number of AP registered on the application.

Returns

the number of AP registered by the application.

6.13.3.14 `long eu.uloop.mobilitytracker.MTrackerDataSource.getNumVisits ()`

Get the number of visits registered in the database.

6.13.3.15 `double eu.uloop.mobilitytracker.MTrackerDataSource.getRank (MTrackerAP ap)`

Computes the Rank of this node towards a given AP. The Rank is computed as

Parameters

<i>ap</i>	The MTrackerAP whose Stationary Time is to be computed.
-----------	---

Returns

The number of visits.

6.13.3.16 `long eu.uloop.mobilitytracker.MTrackerDataSource.getStationaryTime (MTrackerAP ap)`

Computes the Stationary Time for a given AP.

Parameters

<i>ap</i>	The MTrackerAP whose Stationary Time is to be computed.
-----------	---

Returns

The stationary time for the given AP.

6.13.3.17 `long eu.uloop.mobilitytracker.MTrackerDataSource.getStationaryTimeByMoment (MTrackerAP ap, int dayOfTheWeek)`

Computes the Stationary Time for a given AP, only taking into consideration records for a given Day of the Week.

Parameters

<i>ap</i>	The MTrackerAP whose Stationary Time is to be computed.
<i>dayOfTheWeek</i>	Day of the week that will restrict the computation of the stationary time.

Returns

The stationary time for the given AP.

6.13.3.18 `boolean eu.uloop.mobilitytracker.MTrackerDataSource.hasAP (String bssid)`

Checks if a given AP has already been registered by the application.

Parameters

<i>bssid</i>	The ssid of the AP
--------------	--------------------

Returns

true, if AP has already been registered by the application, false otherwise.

6.13.3.19 `void eu.uloop.mobilitytracker.MTrackerDataSource.openDB (boolean writable) throws SQLException`

Opens the predefined MTracker database.

Parameters

<i>writable</i>	
-----------------	--

Exceptions

<i>SQLException</i>	
---------------------	--

6.13.3.20 long eu.uloop.mobilitytracker.MTrackerDataSource.registerNewAP (MTrackerAP ap)

Register a new AP in the application. It creates a new record on the ACCESS_POINTS table, with the information passed as [MTrackerAP](#).

Parameters

<i>ap</i>	Access point information.
-----------	---------------------------

Returns

the row ID of the newly inserted row, or -1 if an error occurred.

6.13.3.21 long eu.uloop.mobilitytracker.MTrackerDataSource.registerNewVisit (String SSID, String BSSID, Long startTime, Long endTime)

Register a new visit into the database.

Parameters

<i>SSID</i>	SSID
<i>BSSID</i>	BSSID
<i>startTime</i>	Time at which the connection started.
<i>endTime</i>	Time at which the connection ended.

Returns

id of the created record, -1 if an error occurs.

6.13.3.22 boolean eu.uloop.mobilitytracker.MTrackerDataSource.updateAP (MTrackerAP ap)

Update an AP already registered by the application. This modifies the corresponding record to the AP in the ACCESS_POINTS table.

Parameters

<i>ap</i>	Access point information.
-----------	---------------------------

Returns

true, if successful.

6.13.3.23 boolean eu.uloop.mobilitytracker.MTrackerDataSource.updateVisit (long _id, String SSID, String BSSID, Long startTime, Long endTime)

Updates an existing visit in the database.

Parameters

<i>_id</i>	id of the record to update
<i>SSID</i>	SSID
<i>BSSID</i>	BSSID
<i>startTime</i>	Time at which the connection started.
<i>endTime</i>	Time at which the connection ended.

Returns

id of the created record, -1 if an error occurs.

6.13.3.24 void eu.uloop.mobilitytracker.MTrackerDataSource.writeAPListToFile ()

Write all the AP registered by the application into a text file (MTracker.txt), located in the root of the directory.

6.13.3.25 void eu.uloop.mobilitytracker.MTrackerDataSource.writeVisitListToFile ()

Writes the Visit List to the file MTrackerVisits.txt.

6.13.4 Member Data Documentation

6.13.4.1 String [] eu.uloop.mobilitytracker.MTrackerDataSource.allColumnsAccessPoint [private]

Initial value:

```
= {
    MTrackerSQLiteHelper.COLUMN_BSSID,
    MTrackerSQLiteHelper.COLUMN_SSID,
    MTrackerSQLiteHelper.COLUMN_ATTRACTIVENESS,
    MTrackerSQLiteHelper.COLUMN_LASTGATEWAYIP
}
```

List of all columns on the ACCESS_POINTS table.

6.13.4.2 String [] eu.uloop.mobilitytracker.MTrackerDataSource.allColumnsVisit [private]

Initial value:

```
= {
    MTrackerSQLiteHelper.COLUMN_SSID,
    MTrackerSQLiteHelper.COLUMN_BSSID,
    MTrackerSQLiteHelper.COLUMN_TIMEON,
    MTrackerSQLiteHelper.COLUMN_TIMEOUT,
    MTrackerSQLiteHelper.COLUMN_DAYOFTHEWEEK,
    MTrackerSQLiteHelper.COLUMN_HOUR
}
```

6.17.1 Detailed Description

This class contains the core functionalities of the application. The [MTrackerService](#) will run in background, getting Wi-Fi parameters and storing the required information in the database.

Author

Jonnahtan Saltarin (ULHT)
 Rute Sofia (ULHT)
 Christian da Silva Pereira (ULHT)

Version

3.0

6.17.2 Member Function Documentation

- 6.17.2.1 void [eu.uloop.mobilitytracker.MTrackerService.announcePossibleHandover](#) (String *nextBssid*, String *nextLastGatewayIp*, long *nextStationaryTime*, long *timetoMove*, long *currentStationaryTime*) [private]

Sends a message to the Access Point with information about average stationary time in this AP, if this is the best AP available for this device, if a change is expected soon and to which AP.

The message is sent using Protobuffers, and the proto definition is shown below:

message MTrackerMessage {

```
    message MTrackerPredictedMove {
        required string BSSID = 1;
        optional uint64 stationaryTime = 2;
        optional string lastGatewayIP = 3;
    }

    required uint64 timeForNextMove = 1;
    required uint64 currentStationaryTime = 2;
    repeated MTrackerPredictedMove = 3 [packed=true];
```

}

Parameters

<i>nextBssid</i>	BSSID of the next AP (The best ranked AP available). If the best AP is the current one, this will be the string "this".
<i>nextLast↔ GatewayIp</i>	Last IP used by the predicted next AP.
<i>nextStationary↔ Time</i>	Average connection time (Stationary Time) in the predicted next AP.
<i>timetoMove</i>	Expected time to change AP. When the message is sent at the beginning of the connection, it is equal to the currentStationaryTime.
<i>current↔ StationaryTime</i>	Average connection time (Stationary Time) in the current AP.

6.17.2.2 void eu.uloop.mobilitytracker.MTrackerService.clearOnStateChangeListeners ()

6.17.2.3 List<MTrackerAP> eu.uloop.mobilitytracker.MTrackerService.getData () [protected]

6.17.2.4 void eu.uloop.mobilitytracker.MTrackerService.notifyDataBaseChange () [private]

Notifies a database change to the listeners.

6.17.2.5 void eu.uloop.mobilitytracker.MTrackerService.notifyPredictedMoveChange (String *newMessage*) [private]

Notifies a new message to the listeners.

Parameters

<i>newMessage</i>	The message to be notified.
-------------------	-----------------------------

6.17.2.6 IBinder eu.uloop.mobilitytracker.MTrackerService.onBind (Intent *intent*)

6.17.2.7 void eu.uloop.mobilitytracker.MTrackerService.onCreate ()

6.17.2.8 void eu.uloop.mobilitytracker.MTrackerService.onDestroy ()

6.17.2.9 int eu.uloop.mobilitytracker.MTrackerService.onStartCommand (Intent *intent*, int *flags*, int *startId*)

6.17.2.10 void eu.uloop.mobilitytracker.MTrackerService.setOnStateChangeListener (DataBaseChangeListener *listener*)

6.17.2.11 boolean eu.uloop.mobilitytracker.MTrackerService.setUloopDispositionalTrust (double *uloopDT*)

Sets the ULOOP Dispositional Trust, which is the default attractiveness.

Parameters

<i>uloopDT</i>	Uloop dispositional trust.
----------------	----------------------------

Returns

true if uloopDT is valid [0-1], false otherwise

6.17.2.12 void eu.uloop.mobilitytracker.MTrackerService.startPeriodicScanning ()

Starts the periodic scanning. This will call the adequate function in the [MTrackerWifiManager](#), which will start a scan periodically. The time between each scan is defined in the [MTrackerWifiManager](#) class.

6.17.2.13 void eu.uloop.mobilitytracker.MTrackerService.stopPeriodicScanning ()

Stops the periodic scanning.

6.17.2.14 void eu.uloop.mobilitytracker.MTrackerService.writeAPListToFile ()

Writes the AP list to a text file.

6.17.2.15 void eu.uloop.mobilitytracker.MTrackerService.writeVisitListToFile ()

Write visits to File
